

piece of mind hosted solutions

Microsoft Small Business Server

With businesses now demanding higher availability and reliability, hosting crucial applications such as a Microsoft Small Business Server elsewhere with constant monitoring, not only saves costs, but also gives piece of mind.

Node4 have made a considerable investment in building our own data centre to make sure that it provides the right environment, even for the most mission critical applications.

A robust and flexible platform that combines:

- Microsoft Exchange Server 2003
- Microsoft SQL Server 2000
- Microsoft Windows SharePoint services
- Microsoft Internet and Security Acceleration Server 2004
- Internet Information Services

Centralise your company data using a Microsoft Small Business Server hosted in Node4's Data Centre and receive a number of benefits:

- Improved productivity throughout your business by being able to quickly locate and share data.
- The server will grow as your business grows - add users quickly and easily yourself, no need for more expensive hardware as you employ more people.
- The range of applications combined on the server, giving you everything you should need throughout your business.
- Help to secure your network and protect the business information by using an operating system you can rely on.
- An on-site technical support team should anything go wrong with your hosted server.
